TO WHOM IT MAY CONCERN:

This letter of recommendation is on behalf of Porter Brothers Construction Company.

BLRB Architect's experience with Porter Brothers Construction goes back several years and has spanned several K-12 school projects for various school districts in Washington State. The projects varied in size and complexity of both new and modernized construction. The two most recent projects with Porter Brothers Construction, were the Pierce County Skills Center for Bethel School District and Lakeridge Middle School for Sumner School District.

The Pierce County Skills Center consisted of a 39,660 sq. ft. remodel project with site work and modernization of an existing building into a new classroom and technical trade school facility. The Lakeridge Middle School facility is a 95,000 sq. ft. new middle school replacement utilizing steel frame and masonry construction. Both projects had their specific challenges, not the least of which was a tight schedule to complete the projects on time for the start of school.

Porter Brother Construction provided planning, coordination, cost control and subcontractor management to provide our clients with a very successful completion of both projects. The end users and staff are very satisfied with their facilities. Porter Brothers Construction currently continues to manage for the owner's the warranty period for both projects in a very professional and expedient manner.

While we can and will have challenges on any construction project, Porter Brother's Construction has demonstrated professional construction services at a level that will yield a quality project.

Sincerely,

Dennis C. Kabba, AIA
Principal
